WHY?

In general this protocol (bittorrent) is used for fast transfer of large files.

You can resume broken download

For information of how it works you can read this link:

[A beginner's guide to BitTorrent](#)

Note:

For best performance of the protocol please follow those rules:

1. Do not stop torrent client after downloading (so other users can download faster)
2. Do not delete downloaded file from target directory (for at least 1 week)
3. Do not share torrent files. (for each box file is unique) and every MT Box is enabled to download torrent file

[Here is example of downloading mtb_nk_setup121.exe with about 0.5MBytes/s \(4 seeders available online\). File is downloaded for 5 seconds.](#)
